DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, 11-13, and 15-16, drawn to methods for electrophoresis.

Group II, claim(s) 10, drawn to a DNA fragment.

Group III, claim(s) 14, drawn to a genetic map.

Group IV, claim(s) 17, drawn to an electrophoresis apparatus.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the Groups I-IV appears to be the method of electrophoresis using an apparatus on which plural electrophoresis gels are run simultaneously.

However, Bishop discloses (U.S. Patent No. 5,865,975, issued 2 February 2, 1999) an apparatus wherein a plurality of electrophoresis cells each containing DNA

Art Unit: 1634

fragments are inserted into an electrophoresis housing, subjected to electrophoresis, and optically scanned after electrophoresis to locate variant fragments (Abstract and Figure 9). Therefore, the technical feature linking the inventions of Groups I-V does not constitute a special technical feature as defined by PCT Rule 13.2 as it does not define a contribution over the prior art.

The special technical feature of Group I is considered to be a method of electrophoresing nucleic acids using a plurality of simultaneously run gels.

The special technical feature of Group II is considered to be a DNA fragment comprising a polymorphism.

The special technical feature of Group III is considered to be a genetic map of an organism comprising a set polymorphism markers.

The special technical feature of Group IV is considered to be an apparatus for simultaneous electrophoresis of a plurality of electrophoresis gels.

Accordingly, Groups I-IV are not so linked by the same or a corresponding special technical feature so as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1634

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
